

Words from Teachers

EMS COURSE

The **EMS** Secondary Acceleration course provides a comprehensive program of advanced classes in **Writing**, **English**, **Mathematics** and **Science**.

Classes are conducted by registered, experienced teachers. Carefully structured workbooks provide explanations, practice exercises and homework. The course builds excellent preparation for scholarships or academic acceleration.

The course then demands close review of the text with a weekly set of comprehension questions for each chapter.

Each term, the students are tested in all four subjects and provided with a detailed report, highlighting their strengths and weaknesses.

Year 9 Entry to Selective School

The **TTC 9** course focuses on the completion of various exams under the strict time limit as well as the development of important exam techniques.

Writing: Provides most efficient skills in organising writing structure with a focus on developing critical thinking and reasoning skills.

Reading: Focuses on reading skills and practising reading comprehension & multiple choice questions.

Maths: Essential tuition for students to completely understand mathematical theories, principles and formulas to solve problems. Maths covered in this course also goes beyond what is taught in year 9. This is because Selective High Schools are looking for students who are able to demonstrate that they are capable of grasping concepts that are more advanced than the normal year 7 syllabus.

Verbal Reasoning: Ranges from basic vocabulary and punctuation to logical thinking. Students will be able to enhance their understanding of the English language and inference skills.

Numerical Reasoning: Deals with applying mathematical logic and concepts to an array of complicated questions that requires coherent logical thinking. While students are practising these question types, they will learn to think outside the box and acquire wider thinking.
